

EDUCATIONAL SYSTEM

The Educational System

The current education system supports 22 years of academic study. The education process includes 2 years of preschool education, 6 years of elementary school, 3 years of junior high school, 3 years of senior high school or vocational education, 4-7 years of college or university, 1-4 years for a master's degree program and 2-7 years for a doctoral degree program.

Compulsory Education

The MOE introduced compulsory education in 1968 with a 9-year program which included 6 years of elementary education and 3 years of junior high. In a nationwide trial of a 10year compulsory education program aimed at integrating the curricula of junior and senior high schools and vocational schools, junior high school students who prefer vocational training can select 2 years of vocational training instead of having the last year of junior high school. To develop a more complete educational environment with fewer burdens for students, the MOE is preparing to implement a 12-year compulsory education program that will integrate primary education, junior high and senior high or vocational education in School Year (SY) 2014.

Senior High and Vocational Education

Senior high or vocational education comes after junior high school in Taiwan. Both senior high and vocational school education provide 3 years of academic training. Vocational schools offer courses in several subject areas such as agriculture, industry, commerce, marine studies, home economics and the arts.

Junior College Education

A junior college education offers students a 2 or 5-year program, each with a different set of admission requirements. The 5-year program accepts graduates from the junior high school level, while the 2-year system accepts senior high and vocational school graduates.

Teacher Education Programs

Taiwan's teacher education system is divided into two programs. Graduates of normal universities are qualified to teach at junior and senior high schools; graduates of universities of education are qualified to teach at kindergartens and elementary schools.

University/College Programs

University/College undergraduate programs require 4 years of study, and students who

cannot successfully finish their studies within this period can apply for an extension of up to 2 years. Other specialized undergraduate programs such as dentistry or medicine mostly take 6-7 years, including 1 year of internship.

Graduate University/College Programs

Graduate programs require 1-4 years for a master's degree and 2-7 years for a doctoral degree, depending on students' academic research and performance. Students who hold jobs and take postgraduate programs as part of an on-the-job training program can apply for an extension if they fail to complete their required courses on time or to finish their thesis or dissertation.

Special Education Programs

Only certain schools or educational institutions are allowed to accept students with special needs. Special education in preschool education and primary school requires at least 6 years; in junior high school, 3 years; and in senior high and senior vocational school, 3 years. Special classes are also offered by regular educational institutions, including primary, junior and senior high schools.

Supplementary Education

Supplementary education provides citizens with another window of opportunity to achieve their educational goals. It is divided into three main categories: basic education, advanced education and short-term supplementary education. The study durations vary with the curriculum design for each category.
